## Exercise 2 - adding waves -- due Mon. Oct 26

Draw/write on these slides.

## part 1

(1) Look at the setup on the next page, a square unit cell of width $5.00 \AA$, with 2 hydrogen atoms in it. Xrays come in from the left, scatter at $2 \theta=90^{\circ}$.
(2) Measure the distance traveled from Wall A to Atom 1 ( $\mathrm{r}_{1}$ ) to Wall B, traveling along beam direction $\mathbf{s}_{0}=(1,0,0)$ and scattered wave $\mathbf{s}=(0,1,0)$, respectively. Divide by the wavelength. Multiply by $2 \pi$ (or 360 ) to get the phase in radians (or degrees).
(3) Do the same for Atom $2\left(r_{2}\right)$. Fill in Table 1.
(4) Add the two waves in Argand space (slide 20 of this lecture). Measure the resulting length (amplitude A) and phase ( $\alpha$ ).

Exercise 2 - copy this page and draw on it - due Mon. Oct 26
Wall B the wave detector

## Exercise 2 - part 2

Calculate the wave sum using the Fourier transform

$$
F(S)=\sum_{k} \varrho\left(r_{k}\right) e^{i 2 \pi S \diamond r_{k}}
$$

$$
\begin{aligned}
\lambda & =1.54 \AA \\
\mathbf{S}_{0} & =(1,0,0) \\
\mathbf{s} & =(0,1,0) \\
\mathbf{S} & =\left(\mathbf{s}-\mathbf{s}_{0}\right) / \lambda=\left(\begin{array}{l}
\square
\end{array}\right)
\end{aligned}
$$

| Table 2 | Measure Å coordinates of $\mathrm{r}_{\mathrm{k}}$ relative to origin from previous page. | $\begin{aligned} & \mathrm{A}_{\mathrm{k}}= \\ & \mathrm{Q}\left(\mathrm{r}_{\mathrm{k}}\right) \end{aligned}$ | $\begin{gathered} \alpha_{\mathrm{k}}= \\ 2 \pi S \cdot{ }_{\mathrm{r}} \end{gathered}$ | $\mathrm{A}_{\mathrm{k}} \cos \left(\alpha_{\mathrm{k}}\right)$ | ${ }^{i} \mathrm{~A}_{\mathrm{k}} \sin \left(\alpha_{k}\right)$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{k}=1$ |  |  |  |  |  |
| $\mathrm{k}=2$ |  |  |  |  |  |
| sum |  |  |  |  |  |
| Amplitude (A) = \| (imag, real) | |  |  |  |  |  |
| phase $(\alpha)=\tan ^{-1}$ (imag/real) (in degrees) |  |  |  |  |  |
